

• LIMB LEADS

• ARTERIES

• CHEST LEADS

NB: POSTERIOR-LATERAL INFARCT

- Lateral ST-elevation may be seen in I, aVL, V5-V6
- If posterior involvement is present, reciprocal ST ↓ may be seen in V1-V3

NB: POSTERIOR INFARCT

- Often no ST-elevation in the standard 12-lead ECG
- Look for horizontal ST ↓ in V1-V3 ± tall R waves
- Confirm with posterior leads V7-V9
